A Survey of Remote Monitoring One of the features of the Criteria that is required of a secure system is the enforcement of discretionary access control (DAC). DAC is a means of restricting access to objects based on the identity of subjects and/or groups to which they belong. The controls are discretionary in the sense that a user or process given discretionary access to information is capable of passing that information along to another subject. This guide discusses issues involved in designing, implementing and evaluating DAC mechanisms. Its primary purpose is to provide guidance to manufacturers on how to select and build effective DAC mechanisms.

Guide to Understanding Discretionary Access Control in Trusted Systems

Proceedings of the 1986 IEEE Symposium on Security and Privacy, April 7-9, 1986, Oakland, California

The 'Orange Book' Series "The National Computer Security Center is issuing A Guide to Understanding Security Testing and Test Documentation in Trusted Systems as part of the Rainbow Series of documents our Technical Guidelines Program produces. In the Rainbow Series, we discuss in detail the features of the Department of Defense Trusted Computer System Evaluation Criteria (DoD 5200.28-STD) and provide guidance for meeting each requirement. The National Computer Security Center, through its Trusted Product Evaluation Program, evaluates the security features of commercially produced computer systems. Together, these programs ensure that users are capable of protecting their important data with trusted computer systems. The specific guidelines in this document provide a set of good practices related to security testing and the development of test documentation. This technical guideline has been written to help the vendor and evaluator community understand what deliverables are required for test documentation, as well as the level of detail required of security testing at all classes in the Trusted Computer System Evaluation Criteria."--DTIC.

CIW Security Professional Study Guide "the most widely accepted set of criteria for computer
security.’ Financial Times The ‘Orange Book’ Series, produced by the American Department of Defense is as yet the only guide to effective computer security for both military and commercial sectors. These 17 documents provide a comprehensive set of guidelines both for people needing to introduce computer security measures and for companies developing secure computer systems and products. It contains details of the various security mechanisms that have been developed over time and the relevance of these to existing policies; how to test for an adequate implementation in a product and engineering techniques to be used as part of the assurance activities that form part of the product evaluation.

Computerworld The 1989 Workshop on the Assessment of Formal Methods for Trustworthy Computer Systems (FM89) was an invitational workshop that brought together representatives from the research, commercial and governmental spheres of Canada, the United Kingdom, and the United States. The workshop was held in Halifax, Nova Scotia, Canada, from July 23 through July 27, 1989. This document reports the activities, observations, recommendations and conclusions resulting from FM89. 1.1 Purpose of Workshop The primary purpose for holding FM89 was to assess the role of formal methods in the development and fielding of trustworthy critical systems. The need for this assessment was predicated upon four observations: 1. Critical systems are increasingly being controlled by computer systems; 2. Existing techniques for developing, assuring and certifying computer-based critical systems are inadequate; 3. Formal methods have the potential for playing the same role in the development of computer-based systems as applied mathematics does for other engineering disciplines; and 4. Formal methods have had limited impact on the development of computer-based systems and supporting technologies. The goal of the workshop was to complete the following tasks: 1. Assess the problems retarding the development of trustworthy critical systems; 2. Determine the (potential) impact of applying formal methods techniques to the development of trustworthy critical systems; 3. Determine the research and development required to facilitate a broader application of formal methods techniques; 4.
